J. Biol. Chem. 269:6661-663(1994).
-i- FUNCTION: THIS SPIDER MAJOR AMPULLATE SILK POSSESSES UNIQUE CHARACTERISTICS OF STRENGTH AND ELASTICITY. IT MAY CONSIST OF PSEUDOCRISTALLINE REGIONS OF ANTIPARALLEL BETA-SHEET INTERSPERSED WITH ELASTIC AMORPHOUS SEGMENTS.
-i- SUBUNIT: MAJOR SUBUNIT, WITH SPIDROIN 2, OF THE DRAGLINE SILK.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence:
         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          number of hits satisfying chosen parameters:
